

Welcome to Oden Control AB

Oden Control AB is since 1996 a provider of innovative reduction gear solutions for a variety of industries and applications

Valve actuators

The **Oden Electrical Actuators** consists of four basic units in different sizes, all using the patented **Oden Gear**. These units, combined with rotary or linear modules control with high precision all types of valves on the market. Until now several thousands have been shipped to the process industry.

Choke valve controller

Oden P30R1 rotary actuator
SCA Obbola Linerboard Mill
Obbola, Sweden

The image shows a complex industrial assembly. A central vertical component is a linear actuator, featuring a blue hydraulic cylinder at the top and a white piston rod extending downwards. This actuator is connected to a combustion burner controller, which is a white, cylindrical device with various ports and a blue valve. The entire assembly is mounted on a metal frame. To the right, there are two blue hydraulic valves connected to a network of pipes. The background consists of dark, industrial metal structures.

Oden P30L1 linear actuator

Combustion burner controller

Controlling the pulp flow

The image shows a complex industrial facility, likely a pulp mill, with a dense network of silver-colored pipes and machinery. The pipes are supported by a metal framework. In the background, there are large cylindrical tanks and more industrial structures. The sky is blue with scattered white clouds. The overall scene is a detailed view of industrial infrastructure.
